Complete & submit with Soil Sample(s) & Payment.

Tests levels of: NO₃-N, NH₄-N, P, K, Org Mat., pH

Submit Tests to our office M-F, 8am-4:30pm • 210 N. Havana St. Spokane, WA 99202

www.SCCD.org
Use clean sampling tools: a bulb planter, push probe, auger or shovel works well. See the diagram for proper technique.

Sample each representative area, 6 inches for lawns, 12 inches for gardens.

Take 10 core samples for each sample to be submitted. Randomly sample throughout the lawn or garden and place in a clean bucket or container (the greater number of cores taken will result in a more representative sample analysis).

Thoroughly mix the core samples together and place 2 cups in a sample bag or zip lock bag.

Fill out the soil sample request form on the reverse and label the sample bag with name, date and sample number (if submitting multiple samples).

Keep bags cool and out of the sun. Take to 210 N Havana for analysis. Refrigerate sample if unable to deliver within 4 hours.

An additional drying fee may be charged for very wet or muddy soils.
